

Environmental Performance

ELECTROMETAL, is a company committed to the environment that has implemented an environmental management system according to ISO 14001.

To know the evolution of the environmental behaviour of our organization, we measure and evaluate, periodically and systematically, legal compliance and other requirements, significant environmental aspects, the analysis of risks and opportunities and the results of compliance with environmental objectives and our **environmental performance**.

We have established **environmental indicators** that provide us with data on the consumption of resources in our facilities, on activities or services, and on waste management generated and emissions associated with transport.

Here is a summary of **our environmental performance in the last year 2024**:

We have managed to **reduce the water consumption** thanks to the implementation of saving measures.

We have managed to **reduce the generation of scrap waste, and hazardous product packaging** thanks to a rational use of resources and avoiding waste.

We have **replaced old machinery with more efficient machines** with less environmental impact.

And finally, we continued to carry out **exhaustive controls of the waste water** from the treatment plant so that it is within the parameters of the municipal ordinances. We have not had any environmental incidents.

Our environmental management system is maintained and well adapted to ISO 14001: 2015.
